

PIMCO International Bond Fund (U.S. Dollar-Hedged)

PERFORMANCE SUMMARY

The PIMCO International Bond Fund (U.S. Dollar-Hedged) returned 1.39% after fees in March, outperforming the Bloomberg Global Aggregate ex-USD (USD Hedged) Index by 0.50%. Year-to-date the Fund has returned 1.20% at NAV, while the benchmark returned 0.58%.

Equity markets continued their upward trajectory, while bond indices modestly rose as several global central banks sent dovish signals to the market. U.S. credit spreads tightened, and developed sovereign bond yields fell, while the dollar strengthened. In the U.S., the 10-year Treasury fell 5 bps to 4.20% as the Federal Reserve reaffirmed its expectation of three rate cuts in 2024. In Germany, the 10-year Bund yield fell 11 bps to 2.30%. In the U.K., 10-year Gilt yields fell 19 bps to 3.93%, while 10-year Japanese government bond yields rose 2 bps to 0.73%.

Contributors

- Selection across the coupon stack within U.S. agency MBS.
- Overweight exposure to duration in the dollar bloc, as yields fell.
- Underweight exposure to the front-end of the U.S. yield curve, as the inverted shape of the curve provided a yield advantage.

Detractors

- Underweight exposure to duration in China, as yields fell.
- Tactical exposure to the euro.

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Investment return and the principal value of an investment will fluctuate. Shares may be worth more or less than original cost when redeemed. Current performance may be lower or higher than performance shown. For performance current to the most recent month-end, visit www.pimco.com or call (888) 87-PIMCO.

Certain Funds may offer a share class with an inception date which is different than the inception date of the Fund. For the periods prior to the inception date of a share class, performance information is based on the performance of the Fund's oldest class shares, adjusted to reflect the fees and expenses paid by that class of shares. The performance figures presented reflect the total return performance, unless otherwise noted, for institutional class shares and reflect changes in share price and reinvestment of dividend and capital gain distributions. All periods longer than one year are annualized. Periods less than one year are cumulative. The minimum initial investment for Institutional class shares is \$1 million; however, it may be modified for certain financial intermediaries who submit trades on behalf of eligible investors.

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index.

There is no assurance that any fund, including any fund that has experienced high or unusual performance for one or more periods, will experience similar levels of performance in the future. High performance is defined as a significant increase in either 1) a fund's total return in excess of that of the fund's benchmark between reporting periods or 2) a fund's total return in excess of the fund's historical returns between reporting periods. Unusual performance is defined as a significant change in a fund's performance as compared to one or more previous reporting periods.

Volatility (10 year)	3.80%

PORTFOLIO POSITIONING

The Fund is underweight overall duration, focusing on country selection. We maintain an overweight to duration in Australia and increased our underweight in the U.S. We remain overweight duration in the U.K. and close to neutral duration in Europe. The Fund expresses a key underweight in Japan, focusing on the longer-end of the curve given the end to the yield curve control regime established by the Bank of Japan. Furthermore, we maintain our underweight to Chinese rates.

We are more constructive on corporate credit given a relatively resilient macro backdrop, but maintain a cautious position in our overall spread exposure given tight valuations. We hold a reduced underweight to non-financial investment grade corporate credit. We prefer instead senior securitized assets, like non-agency mortgages. We maintain an overweight to agency MBS, favoring higher coupons. Within sovereign spread strategies, we remain broadly neutral in Eurozone peripheral countries.

Currency strategies continue to act as a diversifying strategy in the portfolio and positioning remains tactical. We focus on relative value with longs to a basket of currencies with attractive valuations, high real carry, and/or supportive fundamentals. We use a diversified basket of funding currencies from developed markets and Asia.

MONTH IN REVIEW

Equity markets continued their upward trajectory, while bond indices modestly rose as several global central banks sent dovish signals to the market. U.S. credit spreads tightened, and developed sovereign bond yields fell, while the dollar strengthened. In the U.S., the 10-year Treasury fell 5 bps to 4.20% as the Federal Reserve reaffirmed its expectation of three rate cuts in 2024. In Germany, the 10-year Bund yield fell 11 bps to 2.30%. In the U.K., 10-year Gilt yields fell 19 bps to 3.93%, while 10-year Japanese government bond yields rose 2 bps to 0.73%.

Sovereign rate strategies contributed to relative performance over the month. Contributions from overweight exposure to duration in the dollar bloc and underweight exposure to the front-end of the U.S. yield curve more than offset detractions from underweight exposure to duration in China.

Spread sector strategies contributed to relative performance over the month, primarily from selection across the coupon stack within U.S. agency MBS.

Currency strategies contributed to relative performance over the month. Contributions from positions within select EM FX more than offset detractions from tactical exposure to the euro.

OUTLOOK AND STRATEGY

Higher savings balances and a slower pass-through of monetary policy in the U.S. relative to other developed markets could, in our view, keep inflation above the Fed's 2% target over the cyclical horizon. We still expect the Fed to start normalizing policy at midyear, similar to other DM central banks; however, the Fed's subsequent rate-cutting path could be more gradual. Additionally, we believe that an economic soft landing is achievable, but both recessionary and inflationary risks remain elevated in the aftermath of unprecedented global shocks to supply and demand.

In this uncertain environment, we favor portfolio flexibility and liquidity to respond to events and potentially take advantage of opportunities. We are underweight duration in the Fund as central banks assess the speed and timing of rate cuts, contributing to elevated volatility. From a country standpoint, we favor taking duration in the U.K. and dollar bloc countries (primarily Australia) vs. Japan. We continue to hold a moderate allocation to TIPS in the portfolio as valuations are attractive. We hold exposure to select developed market currencies (JPY) as well as select emerging markets currencies (IDR, INR, ZAR, PLN, BRL, MXN) based on valuations.

In spread sectors, we continue to be cautious within corporate credit, focusing on security selection. We remain focused on securitized assets, such as U.S. non-agency mortgages, which we believe offer defensive qualities in addition to reasonable risk premia for liquidity, complexity, and uncertainty over the timing of cash flows.

Investors should consider the investment objectives, risks, charges and expenses of the funds carefully before investing. This and other information are contained in the fund's prospectus and summary prospectus, if available, which may be obtained by contacting your investment professional or PIMCO representative or by visiting www.pimco.com. Please read them carefully before you invest or send money.

*The Securitized bucket will include Agency MBS, nonAgency MBS, CMBS, ABS, CDO, CLO, and Pooled Funds. [†]Net Other Short Duration Instruments includes securities and other instruments (except instruments tied to emerging markets by country of risk) with an effective duration less than one year and rated investment grade or higher or, if unrated, determined by PIMCO to be of comparable quality, commingled liquidity funds, uninvested cash, interest receivables, net unsettled trades, broker money, short duration derivatives and derivatives offsets. With respect to certain categories of short duration securities, the Adviser reserves the discretion to require a minimum credit rating higher than investment grade for inclusion in this category. Derivatives Offsets includes offsets associated with investments in futures, swaps and other derivatives. Such offsets may be taken at the notional value of the derivative position. [‡]Short duration emerging markets instruments includes an emerging market security or other instrument economically tied to an emerging market country by country of risk with an effective duration less than one year and rated investment grade or higher or if unrated, determined to be similar quality by PIMCO. Emerging Markets includes the value of short duration emerging markets instruments previously reported in another category.

[§]Other may include convertibles, preferreds, and yankee bonds.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

A word about risk: Investing in **foreign denominated and/or domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. Investing in the **bond market** is subject to risks, including market, interest rate, issuer, credit, inflation risk, and liquidity risk. The value of most bonds and bond strategies are impacted by changes in interest rates. Bonds and bond strategies with longer durations tend to be more sensitive and volatile than those with shorter durations; bond prices generally fall as interest rates rise, and low interest rate environments increase this risk. Reductions in bond counterparty capacity may contribute to decreased market liquidity and increased price volatility. Bond investments may be worth more or less than the original cost when redeemed. **Mortgage and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee there is no assurance that private guarantors will meet their obligations. **High-yield, lower-rated, securities** involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not. **Equities** may decline in value due to both real and perceived general market, economic, and industry conditions. **Derivatives** may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. The Fund is **non-diversified**, which means that it may invest its assets in a smaller number of issuers than a diversified fund.

Effective duration is a measure of a portfolio's price sensitivity to interest rate changes, including expected changes in cash flows caused by embedded options. The **Sharpe Ratio** measures the risk-adjusted performance. The risk-free rate is subtracted from the rate of return for a portfolio and the result is divided by the standard deviation of the risk-free rate subtracted from the portfolio returns. **Volatility** is measured by the standard deviation, or dispersion of a set of data from its mean, based on historical portfolio returns. A larger spread of data indicates higher standard deviation and higher volatility. **Effective maturity** is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security.

Monthly Morningstar Rating™ as of 31 March 2024 for the INST Shares; other classes may have different performance characteristics. The PIMCO International Bond Fund (U.S. Dollar-Hedged) was rated against the following numbers of Fixed Income, Foreign / Global over the following time periods: Overall 5 Stars (108 funds rated); 3 Yrs. 5 Stars (108 funds rated); 5 Yrs. 5 Stars (101 funds rated); 10 Yrs. 5 stars (62 funds rated). Past performance is no guarantee of future results. A rating is not a recommendation to buy, sell or hold a fund. ©2024 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
