| Strategy | Global Bond | |
| Total Net Assets (in millions) | \$12,664.6 | |
| Portfolio manager(s) | Andrew Balls Sachin Gupta Lorenzo Pagani | |
| Effective duration (yrs) | 7.88 | |
| Benchmark duration (yrs) | 8.26 | |
| Effective maturity (yrs) | 10.44 | |
| Inst. share 30-day SEC yield | 1.19% | |
| Class | CUSIP | Ticker |
| Institutional | 693390882 | PFORX |

Expenses

| | |
|-------------------------|------|
| Gross Expense Ratio (%) | 0.60 |
|-------------------------|------|

| | |
|----------------------------|------|
| Adjusted Expense Ratio (%) | 0.50 |
|----------------------------|------|

The Adjusted Expense Ratio excludes certain investment expenses, such as interest expense from borrowings and repurchase agreements and dividend expense from investments on short sales, incurred directly by the Fund or indirectly through the Fund's investments in underlying PIMCO Funds (if applicable), none of which are paid to PIMCO.

Performance summary

The PIMCO International Bond Fund (U.S. Dollar-Hedged) returned 0.59% after fees in November, outperforming the Bloomberg Barclays Global Aggregate ex-USD (USD Hedged) Index by 0.36%. Year-to-date the Fund has returned 5.31% after fees, outperforming the benchmark by 1.79%.

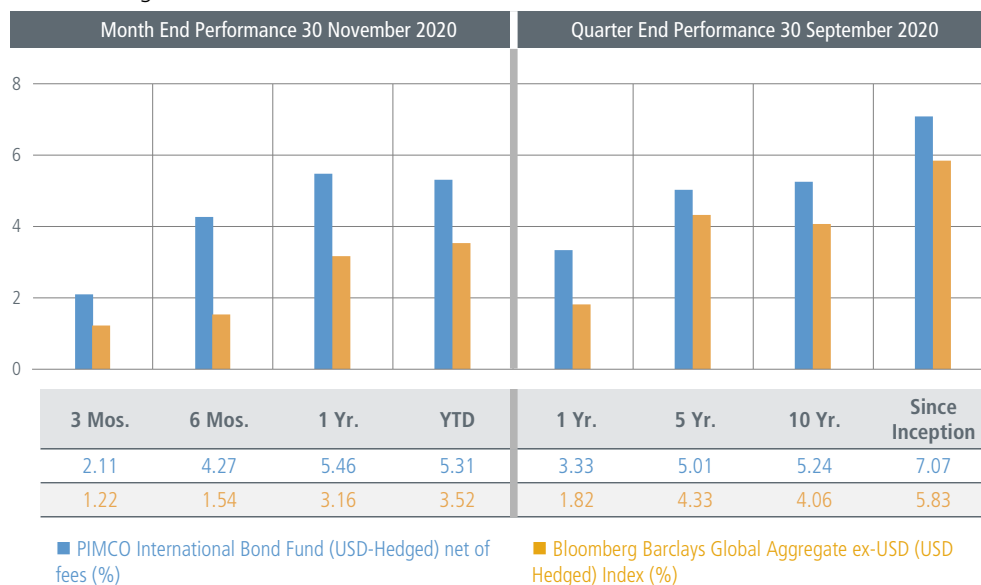

Risk assets broadly gained in November as positive vaccine developments and the US election outcomes - a Biden victory alongside a potentially divided congress - bolstered market optimism. Global equities rallied with the S&P 500 hitting record highs, credit spreads tightened, the dollar weakened, and oil prices rose. Developed sovereign yields were broadly mixed - U.S. yields fell and the curve flattened, while yields in the U.K. and Germany ended the month higher.

Contributors

- Overweight to senior and subordinated financials
- Positions in Agency and non-Agency MBS
- Positions in EM external debt

Detractors

- Underweight to non-financial investment grade corporate credit
- Overweight to duration in Australia

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Investment return and the principal value of an investment will fluctuate. Shares may be worth more or less than original cost when redeemed. Current performance may be lower or higher than performance shown. For performance current to the most recent month-end, visit PIMCO.com or by calling 888.87.PIMCO.

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index. There is no assurance that any fund, including any fund that has experienced **high or unusual performance** for one or more periods, will experience similar levels of performance in the future. High performance is defined as a significant increase in either 1) a fund's total return in excess of that of the fund's benchmark between reporting periods or 2) a fund's total return in excess of the fund's historical returns between reporting periods. Unusual performance is defined as a significant change in a fund's performance as compared to one or more previous reporting periods.

The minimum initial investment for institutional class shares is \$1 million; however, it may be modified for certain financial intermediaries who submit trades on behalf of eligible investors.

| EM Short Duration Instruments | -0.03 | 0.00 |
| Other | 0.00 | 0.00 |
| Net Other Short Duration Instruments ² | 0.16 | 0.00 |

¹ The Securitized bucket will include Agency MBS, non-Agency MBS, CMBS, ABS, CDO, CLO, and Pooled Funds.

² Net Other Short Duration Instruments includes securities and other instruments (except those instruments tied to emerging markets by country of risk) with an effective duration less than one year and rated investment grade or higher or, if unrated, determined by PIMCO to be of comparable quality, commingled liquidity funds, uninvested cash, interest receivables, net unsettled trades, broker money, short duration derivatives and derivatives offsets. With respect to certain categories of short duration securities, the Adviser reserves the discretion to require a minimum credit rating higher than investment grade for inclusion in this category. Derivatives Offsets includes offsets associated with investments in futures, swaps and other derivatives. Such offsets may be taken at the notional value of the derivative position.

³ Europe Non-EMU: Denmark, Greenland, Iceland, Jersey Channel Islands, Liechtenstein, Norway, Sweden, and Switzerland

⁴ Dollar Block includes Australia, New Zealand, and Canada

⁵ OIC includes Supranationals and any other country with a GNI of \$12,275 / per capita

⁶ CEEMEA includes EM countries in Central and Eastern Europe, the Middle East, and Africa

Portfolio positioning

The Fund is modestly underweight to duration overall, but has emphasized sourcing duration from high quality countries such as Denmark, Australia, and Canada, that have the potential to provide diversification benefits in a risk-off scenario. Notably, the Fund is now modestly underweight to duration in the U.S. as rates are

range-bound and could face some upward pressure over the cyclical horizon. In the eurozone, the Fund is underweight duration in aggregate with an overweight in the peripherals and an underweight in the core/semi-core regions. The Fund remains underweight to duration in Japan and the U.K.

The Fund continues to take a cautious approach to investment-grade corporate credit given tight valuations and the vulnerable market environment. Instead, the Fund favors senior securitized assets, like Agency and non-Agency mortgages as well as U.K. residential mortgages and Danish covered bonds. The Fund also continues to hold positions in U.S. TIPS and high-quality EM external debt.

In currencies, we are modestly underweight the U.S. dollar against the euro, Japanese yen and other select developed and emerging market currencies.

Month in review

Risk assets broadly gained in November as positive vaccine developments and the US election outcomes - a Biden victory alongside a potentially divided congress - bolstered market optimism. Global equities rallied with the S&P 500 hitting record highs, credit spreads tightened, the dollar weakened, and oil prices rose. Developed sovereign yields were broadly mixed - U.S. yields fell and the curve flattened, while yields in the U.K. and Germany ended the month higher.

Sovereign rate strategies were about neutral for relative performance over the month. Contributions from interest rate positioning in the Eurozone about offset detractions from an overweight to duration in Australia.

Spread sector strategies contributed to relative performance over the month. Contributions from positions in Agency and non-Agency MBS, an overweight to senior and subordinated financials, as well as positions in EM external debt, more than offset detractions from an underweight to non-financial investment grade corporate credit.

Currency strategies also contributed to relative performance over the month, primarily due to long exposure to the Chinese yuan and other select emerging market currencies.

International Bond Fund (U.S. Dollar-Hedged)

Outlook and strategy

We expect an uneven path to economic recovery, with swing factors like the coronavirus outbreak, trade tensions, central bank policy, and other geopolitical developments driving more uncertainty for the outlook ahead.

By positioning cautiously and emphasizing liquidity, we believe we will be better prepared to respond to a variety of shocks. We are modestly underweight duration in the Fund - although global yields are fairly low, we continue to seek relative value opportunities that aim to benefit from an ongoing global grab for duration in the event that the economic outlook worsens. In Europe, accommodative ECB action suggests a more favorable view on peripheral eurozone rates relative to that of core and semi-core. While the outlook for inflation is subdued, we continue to hold a moderate allocation to TIPS in the portfolio based on attractive valuations and as a hedge against a potential inflation overshoot. We are moderately underweight the U.S. dollar against select developed and emerging market currencies based on valuations.

In spread sectors, we continue to be selective and avoid generic corporate credit risk due to increased risks spurred by recent volatility. We prefer securitized assets, including U.S. non-agency mortgages, U.K. residential mortgages, and Danish mortgages, which offer defensive qualities in addition to reasonable risk premia for liquidity, complexity, and uncertainty over the timing of cash flows. We also continue to hold high quality EM external debt of sovereign and quasi-sovereign issuers in the Middle East.

Investors should consider the investment objectives, risks, charges and expenses of the funds carefully before investing. This and other information are contained in the fund's prospectus and summary prospectus, if available, which may be obtained by contacting your financial advisor or PIMCO representative or by visiting www.pimco.com. Please read them carefully before you invest or send money.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

A word about risk: Investing in **foreign denominated and/or domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. **Mortgage and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee there is no assurance that private guarantors will meet their obligations. **Derivatives** may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. The Fund is **non-diversified**, which means that it may concentrate its assets in a smaller number of issuers than a diversified fund.

The value of most bond funds and fixed income securities are impacted by **changes in interest rates**. Bonds and bond funds with longer durations tend to be more sensitive and more volatile than securities with shorter durations; bond prices generally fall as interest rates rise.

The Lipper Fund Awards are based on the Lipper Leader for Consistent Return rating, which is a riskadjusted performance measure calculated over 36, 60 and 120 months. The fund with the highest Lipper Leader for Consistent Return (Effective Return) value in each eligible classification wins the Lipper Fund Award. For more information, see lipperfundawards.com. Morningstar ratings are only shown for those funds that have achieved a 4 or 5 star rating. Ratings for other share classes are either lower or not available.

International Bond Fund (U.S. Dollar-Hedged)

Duration is a measure of a portfolio's price sensitivity expressed in years. Effective duration is the duration for a bond with an embedded option when the value is calculated to include the expected change in cash flow caused by the option as interest rates change.

Bloomberg Barclays Global Aggregate ex-USD (USD Hedged) Index provides a broad-based measure of the global investment-grade fixed income markets. The major components of this index are the Pan-European Aggregate and the Asian-Pacific Aggregate Indices. The index also includes Eurodollar and Euro-Yen corporate bonds and Canadian Government securities. It is not possible to invest directly in an unmanaged index.

Statements concerning financial market trends or portfolio strategies are based on current market conditions, which will fluctuate. There is no guarantee that these investment strategies will work under all market conditions or are suitable for all investors and each investor should evaluate their ability to invest for the long term, especially during periods of downturn in the market. Outlook and strategies are subject to change without notice. Performance reflects changes in share price, reinvestment of dividends and capital gains distributions. All periods longer than one year are annualized. This material contains the current opinions of the manager but not necessarily those of PIMCO and such opinions are subject to change without notice.
