PIMCO Mortgage-Backed Securities Fund

Quarterly Investment Report | 2Q22

IMPORTANT NOTICE
Please note that this material contains the opinions of the manager as of the date noted, and may not have been updated to reflect real time market developments. All opinions are subject to change without notice.

A company of Allianz

Executive summary

Portfolio Performance

The Mortgage Backed Securities strategy returned -5.41% (net of fees). U.S. duration positioning, exposure to senior non-Agency RMBS and Agency MBS relative value strategies detracted from performance. Structured Agency MBS positions, EUR duration positioning and USD exposure contributed to performance.

Class:	**INST**
Inception date:	**31 Jul '97**
Fund assets (in millions):	**$159.16**
Gross expense ratio:	**0.52%**
Adjusted expense ratio:	**0.50%**

The Adjusted Expense Ratio excludes certain investment expenses, such as interest expense from borrowings and repurchase agreements and dividend expense from investments on short sales, incurred directly by the Fund or indirectly through the Fund's investments in underlying PIMCO Funds (if applicable), none of which are paid to PIMCO.

CONTRIBUTORS

- Structured Agency MBS positions
- EUR duration positioning
- USD exposure

DETRACTORS

- U.S. duration positioning
- Exposure to senior non-Agency RMBS
- Agency MBS relative value strategies

Portfolio strategy

Interest rate strategies: We tactically adjust our exposure to duration as a way to diversify the spread risk within the portfolio.

Agency MBS relative value strategies: We look to adjust our Agency MBS spread exposure as a function of valuations. During the quarter, we decreased our relative Agency MBS spread exposure, but continue to find attractive relative value opportunities.

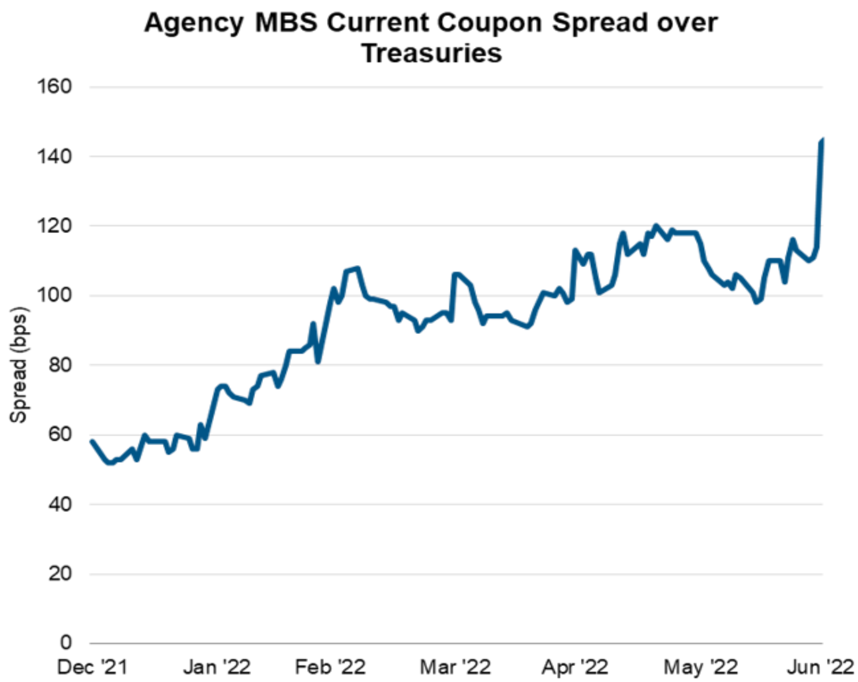
Mortgage credit strategies: We remain constructive on mortgage credit, with a preference for senior non-Agency RMBS. In CMBS, we favor securities at the top of the capital structure, while senior CLOs and select ABS present opportunities within the high quality securitized space.

*Bloomberg U.S. MBS Fixed-Rate Index;

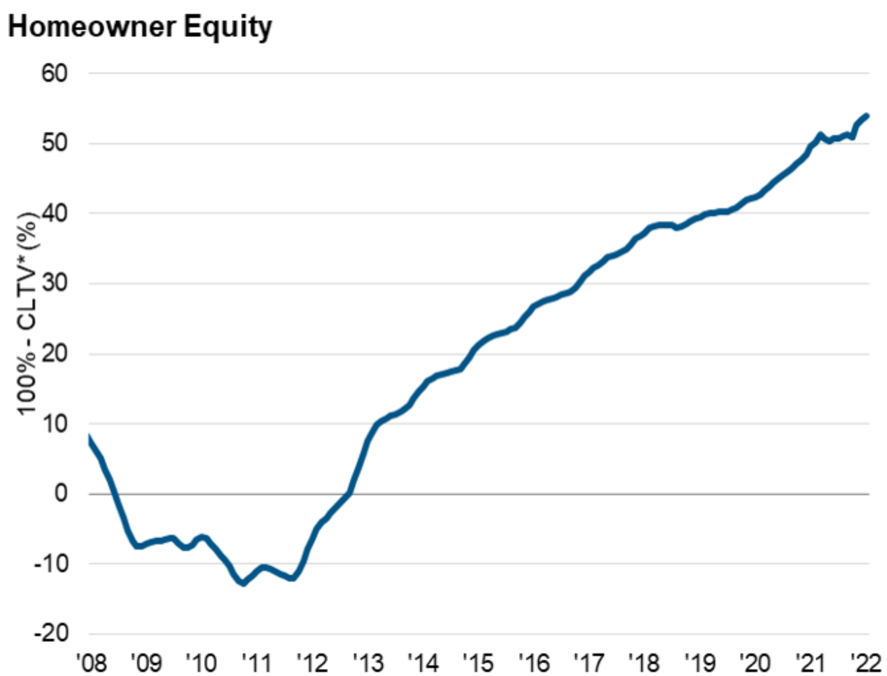
Quarter in Review

Despite recent volatility, the mortgage market continues to offer attractive relative value opportunities

Agency MBS[1] returned -4.01% during Q2, underperforming like duration Treasuries by 98 bps. Volatility in the Agency MBS market persisted during the quarter as rates continued to sell off and the Fed began its balance sheet reductions. Legacy non-Agency residential MBS spreads widened 65 bps alongside the broader credit market, while non-Agency commercial MBS[2] returned -3.25%, underperforming like-duration Treasuries by 114 bps.



Agency MBS markets have seen significant spread widening YTD, but valuations are now more attractive and opportunities for relative value have increased.



Senior non-Agency MBS fundamentals remain robust amidst market volatility and homeowner equity remains healthy.

Source: PIMCO
1 Represented by the Bloomberg Fixed Rate MBS Index
2 Represented by the Bloomberg Investment Grade Non-Agency CMBS Index

Source: PIMCO
Homeowner equity measured by 100% - loan to value.

Market Summary

Mortgages underperformed during the quarter alongside the broader rise in rates and Fed balance sheet reductions

Agency MBS spreads continued to widen during Q2, but valuations are now more attractive and opportunities for relative value have increased.

Interest rates

U.S. interest rates increased during the quarter and we decreased the Fund's relative duration exposure, shifting to an underweight duration position versus the benchmark. We continue to utilize interest rate options to help hedge extension risk during periods of rising rates.

Agency MBS

Agency MBS underperformed like-duration Treasuries during the quarter, with higher coupons generally outperforming lower coupons. Conventional MBS outperformed GNMA MBS during the quarter.

Mortgage credit

We continue to maintain exposure to senior non-Agency RMBS and CMBS. Senior non-Agency MBS stand out as attractive and benefit from the strong U.S. housing market, which is supported by limited supply and strong borrower fundamentals. We continue to view senior CMBS as a good diversifier to corporate credit.

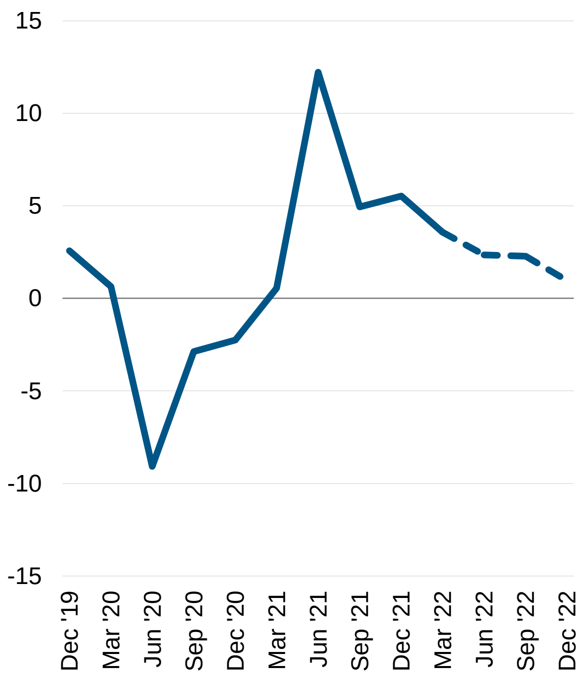
PIMCO

Cyclical Outlook: “Anti-Goldilocks” backdrop and elevated recession risks

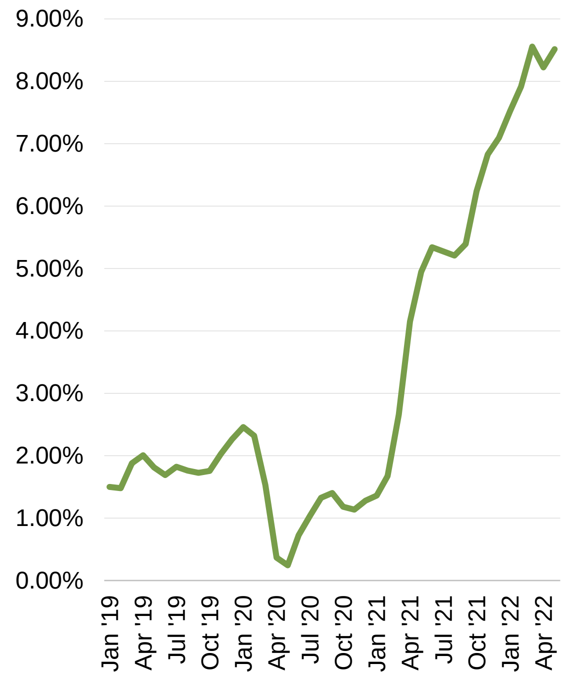
Activity too cold

US real GDP*



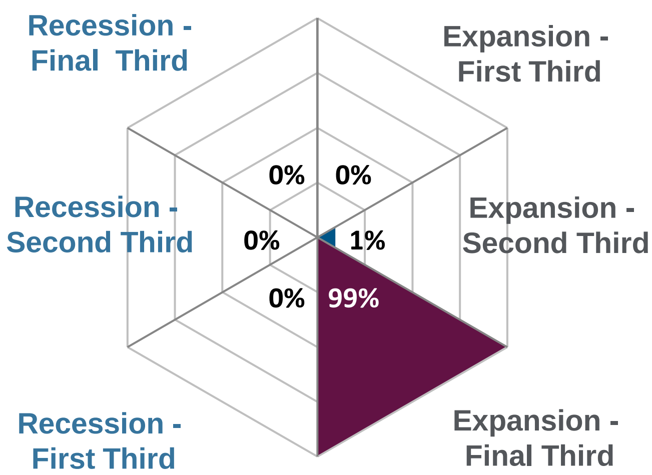
Inflation too hot

US headline CPI y/y



Recession risk elevated

Stylized business cycle model



For illustrative purposes only. As of June 2022. SOURCE: PIMCO
* Figures in percentages.
The dynamic factor model (DFM) divides the business cycle into six phases; for example, 2T (second third) expansion is the mid-cycle expansion phase. The model incorporates a set of underlying factors with the potential to drive economic growth and assumes various economic time series are realizations of these factors with varying time lags. We estimate these factors based on 750 U.S. time-series variables covering a wide range of phenomena, including growth and its components, inflation components, labor market data, surveys, housing statistics, banking data, interest rates, asset price series, and more.
Refer to Appendix for additional outlook and risk information.

PIMCO

Portfolio Outlook

Strategic Positioning

Agency MBS spreads widened during June, as rate volatility remained exceptionally high and the pool of traditional MBS buyers were inactive. Gross issuance declined over the quarter and we expect issuance to remain below 2021 levels as rates remain elevated and refinancing activity slows. Prepayment speeds decreased over the quarter while U.S. mortgage rates increased to 5.83%. PIMCO remains constructive on senior U.S. securitized credit. Despite increasing rates, we do not believe that affordability will have a material impact on fundamental quality of non-Agency MBS.

Key strategies	Position
Interest rate strategies We are underweight U.S. duration and will continue to scale exposure based on interest rate levels and compensation for risk. We believe duration is a useful diversifier to the fund's mortgage credit exposure.	Historical duration vs. benchmark Agency MBS relative value We have remained underweight in lower coupons given demand pressures and overweight in higher coupons given stronger valuations and less Fed exposure.	Historical Agency MBS spread duration contribution vs. benchmark Mortgage credit Senior non-Agency MBS remain an area of high conviction given compelling base case yields and seniority in the capital structure. Senior CLOs and CMBS also present select opportunities within the high quality securitized space.	Historical non-Agency MBS market weighted spread duration

Bloomberg U.S. MBS Fixed-Rate Index						-4.01	-8.78	-9.03	-1.44	0.36	1.18	4.07

The Net Expense Ratio for the I-3 Class reflects a contractual supervisory and administrative fee waiver and/or expense reduction in place through 31 July 2022 and renews automatically for a full year unless terminated by PIMCO in accordance with the terms of the agreement. See the Fund's prospectus for more information.

The Adjusted Expense Ratio excludes certain investment expenses, such as interest expense from borrowings and repurchase agreements and dividend expense from investments on short sales, incurred directly by the Fund or indirectly through the Fund’s investments in underlying PIMCO Funds (if applicable), none of which are paid to PIMCO.

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Investment return and the principal value of an investment will fluctuate. Shares may be worth more or less than original cost when redeemed. Current performance may be lower or higher than performance shown. For performance current to the most recent month end, visit pimco.com or call 888.87.PIMCO. The maximum offering price (MOP) returns take into account the Class A maximum initial sales charge of 3.75%.The maximum offering price (MOP) returns take into account the contingent deferred sales charge (CDSC) for Class C shares, which for this fund is 1.00%.

For the periods prior to the inception date of a share class, performance information is based on the performance of the Fund's oldest class shares, adjusted to reflect the fees and expenses paid by that class of shares.

Important Disclosures

This material is authorized for use only when preceded or accompanied by the current PIMCO funds prospectus or summary prospectus, if available.

Past performance is not a guarantee or a reliable indicator of future results. The performance figures presented reflect the total return performance, unless otherwise noted, after fees and reflect changes in share price and reinvestment of dividend and capital gain distributions. All periods longer than one year are annualized. Periods less than one year are cumulative. The minimum initial investment for Institutional, I-2, I-3 and Administrative class shares is $1 million; however, it may be modified for certain financial intermediaries who submit trades on behalf of eligible investors.

There is no assurance that any fund, including any fund that has experienced **high or unusual performance** for one or more periods, will experience similar levels of performance in the future. High performance is defined as a significant increase in either 1) a fund's total return in excess of that of the fund's benchmark between reporting periods or 2) a fund's total return in excess of the fund's historical returns between reporting periods. Unusual performance is defined as a significant change in a fund's performance as compared to one or more previous reporting periods.

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

A word about risk: Investing in the **bond market** is subject to risks, including market, interest rate, issuer, credit, inflation risk, and liquidity risk. The value of most bonds and bond strategies are impacted by changes in interest rates. Bonds and bond strategies with longer durations tend to be more sensitive and volatile than those with shorter durations; bond prices generally fall as interest rates rise, and low interest rate environments increase this risk. Reductions in bond counterparty capacity may contribute to decreased market liquidity and increased price volatility. Bond investments may be worth more or less than the original cost when redeemed. Investing in **foreign denominated and/or domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. **Mortgage and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee there is no assurance that private guarantors will meet their obligations. **Equities** may decline in value due to both real and perceived general market, economic, and industry conditions. **Derivatives** may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. **Diversification** does not ensure against loss.

Portfolio allocations and other information in the charts in this Quarterly Investment Report are based on the fund's net assets. These percentages may differ from those used for the fund's compliance calculations, including the fund's prospectus, regulatory, and other investment limitations and policies, which may be based on total assets of the fund or other measurements, may include or exclude various categories of investments from those covered in the portfolio allocation categories shown in this report, and may be based on different classifications and measurements of the fund's investments and other criteria. All funds are separately monitored for compliance with prospectus and regulatory requirements.

Statements concerning financial market trends or portfolio strategies are based on current market conditions, which will fluctuate. There is no guarantee that these investment strategies will work under all market conditions or are appropriate for all investors and each investor should evaluate their ability to invest for the long term, especially during periods of downturn in the market. Outlook and strategies are subject to change without notice.

Important Disclosures

Forecasts, estimates and certain information contained herein are based upon proprietary research and should not be interpreted as investment advice, as an offer or solicitation, nor as the purchase or sale of any financial instrument. Forecasts and estimates have certain inherent limitations, and unlike an actual performance record, do not reflect actual trading, liquidity constraints, fees, and/or other costs. In addition, references to future results should not be construed as an estimate or promise of results that a client portfolio may achieve.

Bloomberg U.S. MBS Fixed-Rate Index covers the mortgage-backed pass-through securities and hybrid ARM pools of Ginnie Mae (GNMA), Fannie Mae (FNMA), and Freddie Mac (FHLMC). The MBS Index is formed by grouping individual fixed rate MBS pools into generic aggregates. It is not possible to invest directly in an unmanaged index.

The following defined terms are used throughout the report. Emerging market short duration instruments includes an emerging market security or other instrument economically tied to an emerging market country by country of risk with an effective duration less than one year and rated investment grade or higher or if unrated, determined to be similar quality by PIMCO. Net other short duration instruments includes securities and other instruments (except instruments tied to emerging markets by country of risk) with an effective duration less than one year and rated investment grade or higher or, if unrated, determined by PIMCO to be of comparable quality, commingled liquidity funds, uninvested cash, interest receivables, net unsettled trades, broker money and derivatives offset. With respect to certain categories of short duration securities, the Adviser reserves the discretion to require a minimum credit rating higher than investment grade for inclusion in this category. Short duration derivatives and derivatives offsets include: 1) derivatives with an effective duration less than one year and where the country of risk is not an emerging market country (for example, Eurodollar futures) and 2) offsets associated with investments in futures, swaps and other derivatives. Such offsets may be taken at the notional value of the derivative position which in certain instances may exceed the actual amount owed on such positions. Municipals/Other may include convertibles, preferred and yankee bonds.

The performance figures presented reflect the performance for the institutional class unless otherwise noted.

A note about Sector exposure: Other indicates swaps and securities issued in euros.

A note about Emerging markets exposure by country of risk: country of risk reflects the country of incorporation of the ultimate parent company.

PIMCO uses an internal model for calculating effective duration, which may result in a different value for the duration of an index compared to the duration calculated by the index provider or another third party.

Important Disclosures

Acronyms and definitions of investment terms used throughout the report:

Alpha is a measure of performance on a risk-adjusted basis calculated by comparing the volatility (price risk) of a portfolio vs. its risk-adjusted performance to a benchmark index; the excess return relative to the benchmark is alpha.

Average coupon is the average of the coupon payments of the underlying bonds within the portfolio.

Average effective maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security.

“Bend-but-not-break” refers to credits that PIMCO would not expect to default in a credit-stressed environment.

Beta is a measure of price sensitivity to market movements. Market beta is 1.

Breakeven inflation rate (or expectation) is a market-based measure of expected inflation or the difference between the yield of a nominal and an inflation-linked bond of the same maturity.

Carry is the rate of interest earned by holding the respective securities.

The terms **“cheap” and “rich”** as used herein generally refer to a security or asset class that is deemed to be substantially under- or overpriced compared to both its historical average as well as to the investment manager’s future expectations. There is no guarantee of future results or that a security’s valuation will ensure a profit or protect against a loss.

CPI is the Consumer Price Index.

The **credit quality** of a particular security or group of securities does not ensure the stability or safety of an overall portfolio. The quality ratings of individual issues/issuers are provided to indicate the credit-worthiness of such issues/issuer and generally range from AAA, Aaa, or AAA (highest) to D, C, or D (lowest) for S&P, Moody’s, and Fitch respectively.

Dividend yield is represented by the weighted average coupon divided by the weighted average price.

Duration is the measure of a bond's price sensitivity to interest rates and is expressed in years.

Effective duration is the duration for a bond with an embedded option when the value is calculated to include the expected change in cash flow caused by the option as interest rates change.

Forward curve is a function graph that defines the prices at which a contract for future delivery or payment can be concluded today.

Information ratio is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns.

Like-duration Securities are calculated by the index provider by comparing the index return to a hypothetical matched position in the security.

The **Option Adjusted Spread (OAS)** measures the spread over a variety of possible interest rate paths. A security's OAS is the average return an investor will earn over Treasury returns, taking all possible future interest rate scenarios into account. The OAS is the net spread over the swap curve that will on average be earned if the security is held to maturity.

“Risk assets” are any financial security or instrument that are likely to fluctuate in price.

Risk premia is the return in excess of the risk-free rate of return an investment is expected to yield.

Roll yield is the yield that a futures investor captures as their long position in a futures contract converges to the spot price.

“Safe haven” is an investment that is expected to retain or increase in value during times of market turbulence.

The **SEC yield** is an annualized yield based on the most recent 30 day period.

Tracking error measures the dispersion or volatility of excess returns relative to a benchmark.

To relate the price sensitivity of ILBs to changes in nominal yields, yield beta is applied to nominal changes to arrive at a price sensitivity of ILBs to changes in nominal rates. A **yield beta** of 0.90 implies that if nominal yields move 100 basis points, real yields will move 90 basis points. ILBs with long maturity may respond differently to changes in nominal rates than shorter maturity ILBs.

The distribution yield for monthly paying Funds is calculated by annualizing actual dividends distributed for the monthly period ended on the date shown and dividing by the net asset value on the last business day for the same period. The distribution yield for quarterly paying Funds is calculated by taking the average of the prior four quarterly distribution yields. The quarterly distribution yields are calculated by annualizing actual dividends distributed for the quarterly period ended on the most recent quarterly distribution date and dividing by the net asset value for the same date. The yield does not include long- or short-term capital gains distributions.
