## Fund description

PIMCO California Short Duration Municipal Income Fund is an actively-managed portfolio of short-term, high quality California municipal bonds, which carry interest payments that are exempt from federal and California state tax. The fund seeks high current tax exempt income, consistent with preservation of capital.

## INVESTOR BENEFITS

The fund offers investors an actively-managed portfolio of high quality, short duration municipal bonds to help meet their ongoing and long-term financial goals and objectives. The fund seeks to capitalize on opportunities across sectors within the California municipal market in order to achieve a attractive tax-exempt income. The fund's average duration is expected to be less than three years, and it will not invest in municipal bonds subject to the alternative minimum tax (AMT).

Potential benefits of this fund include:

- A competitive after-tax short-term yield
- Income exempt from federal and California income taxes
- No AMT exposure
- Low correlations to equities and certain other taxable fixed income sectors
- Relative value opportunities resulting from fundamental credit research
- Efficient trading execution and lower trading costs as a result of PIMCO's market presence

## THE FUND ADVANTAGE

A high credit quality portfolio of short duration municipal bonds issued in the state of California, the fund benefits from PIMCO's time-tested investment process. Our rigorous process which combines PIMCO's global top-down macroeconomic views with bottom-up analysis of credit quality and market factors, including supply, demand and liquidity, by our dedicated municipal credit research analysts and global credit research team. PIMCO's experienced portfolio management team and forward-looking fundamental credit analysis give the fund a potential edge in navigating the municipal bond market.

## VALUE OF TAX-EFFICIENT STRATEGIES

An allocation to PIMCO's municipal strategies may be beneficial as part of a diversified portfolio, particularly for a taxable investor. Interest income on municipal bonds is exempt from federal income tax and, in some cases, state income tax. For investors facing higher marginal tax rates, municipals can offer greater after-tax yields than taxable debt securities of similar maturities and credit quality, including Treasuries and corporate bonds.

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Investment return and the principal value of an investment will fluctuate. Shares may be worth more or less than original cost when redeemed. Current performance may be lower or higher than performance shown. For performance current to the most recent month-end, visit [PIMCO.com](http://PIMCO.com) or by calling 888.87.PIMCO.

For the periods prior to the inception date of a share class, performance information is based on the performance of the Fund's oldest class shares, adjusted to reflect the fees and expenses paid by that class of shares.

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index. There is no assurance that any fund, including any fund that has experienced **high or unusual performance** for one or more periods, will experience similar levels of performance in the future. High performance is defined as a significant increase in either 1) a fund's total return in excess of that of the fund's benchmark between reporting periods or 2) a fund's total return in excess of the fund's historical returns between reporting periods. Unusual performance is defined as a significant change in a fund's performance as compared to one or more previous reporting periods.

\* Based on total return performance, with distributions reinvested, and operating expenses deducted.

Investors should consider the investment objectives, risks, charges and expenses of the funds carefully before investing. This and other information are contained in the fund's prospectus and summary prospectus, if available, which may be obtained by contacting your PIMCO representative. Please read them carefully before you invest or send money.

MV% may not equal 100 due to rounding.

Performance reflects changes in share price, reinvestment of dividends and capital gains distributions. All periods longer than one year are annualized.

Effective duration is the duration for a bond with an embedded option when the value is calculated to include the expected change in cash flow caused by the option as interest rates change.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

**A word about risk:** Investing in the **bond market** is subject to risks, including market, interest rate, issuer, credit, inflation risk, and liquidity risk. The value of most bonds and bond strategies are impacted by **changes in interest rates**. Bonds and bond strategies with longer durations tend to be more sensitive and volatile than those with shorter durations; bond prices generally fall as interest rates rise, and low interest rate environments increase this risk. Reductions in bond counterparty capacity may contribute to decreased market liquidity and increased price volatility. Bond investments may be worth more or less than the original cost when redeemed. **Mortgage and asset-backed securities** may be sensitive to **changes in interest rates**, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee there is no assurance that private guarantors will meet their obligations. **High-yield, lower-rated, securities** involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not. Investors will, at times, incur a tax liability. Income from **municipal bonds** may be subject to state and local taxes and at times the alternative minimum tax; a fund concentrating in a single state is subject to greater risk of adverse economic conditions and regulatory changes. **Equities** may decline in value due to both real and perceived general market, economic, and industry conditions. **Derivatives** may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. **Diversification** does not ensure against loss.

Past rankings are no guarantee of future rankings. Rankings begin with the inception of the actual share class. Lipper does not take into account sales charges.

The minimum initial investment for institutional class shares is \$1 million; however, it may be modified for certain financial intermediaries who submit trades on behalf of eligible investors.
