EXPENSES

Gross Expense Ratio (%)	0.39
Net Expense Ratio (%)	0.27

The Net Expense Ratio reflects a contractual fee waiver and/or expense reduction, which is in place through 31 October 2021 and renews automatically for a full year unless terminated by PIMCO in accordance with the terms of the agreement.

Adjusted Expense Ratio (%)	0.24
----------------------------	------

The Adjusted Expense Ratio is the same as the Net Expense Ratio, but also excludes certain investment expenses, such as interest expense from borrowings and repurchase agreements and dividend expense from investments on short sales, incurred directly by the Fund or indirectly through the Fund's investments in underlying PIMCO Funds (if applicable), none of which are paid to PIMCO. *Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and principal value will fluctuate, so that Fund shares may be worth more or less than their original cost when sold. Performance data current to the most recent month-end is available at www.pimco.com or call 888-400-4ETF.*

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index. There is no assurance that any fund, including any fund that has experienced **high or unusual performance** for one or more periods, will experience similar levels of performance in the future. High performance is defined as a significant increase in either 1) a fund's total return in excess of that of the fund's benchmark between reporting periods or 2) a fund's total return in excess of the fund's historical returns between reporting periods. Unusual performance is defined as a significant change in a fund's performance as compared to one or more previous reporting periods.

*The Fund returns are since the Fund's inception on 10 December 2019 and the index returns are since 30 November 2009. Performance assumes reinvestment of dividends and capital gains distributions. Taxes on distributions or redemptions have not been deducted.

Enhanced Short Maturity Active ESG Exchange-Traded Fund (EMNT)

Explanation of portfolio characteristics

- We are modestly overweight with overall duration positioning, but remain tactical to balance global risks as markets and policy makers respond to evolving conditions.
- We are focusing on security selection with a bias toward high quality, liquid names, and avoiding sectors with structural challenges from an ESG perspective, such as the oil and automotive industries. We also hold high quality, short-dated asset backed securities. We maintain exposure to short-dated investment grade credit, with an emphasis on bottom-up security selection.
- We continuously seek to identify attractively priced green bonds to address climate change issues and support leading environmental practices.

Market commentary

The Enhanced Short Maturity Active ESG ETF's NAV outperformed its benchmark in November, as the Fund's spread and duration strategies contributed to performance.

Risk assets broadly gained in November as positive vaccine developments and the US election outcomes – a Biden victory alongside a potentially divided congress – bolstered market optimism. Global equities rallied with the S&P 500 hitting record highs, credit spreads tightened, the dollar weakened, and oil prices rose. Developed sovereign yields were broadly mixed – curves flattened in the U.S. and Canada, while yields in the U.K. and Germany ended the month higher.

We seek to position the portfolio for resiliency as the economic impacts of the virus and reopening efforts continue to manifest. We continue to be cautious on interest rate exposure. We are emphasizing opportunities that offer ample liquidity, compelling yields, and capital preservation. We remain patient as opportunities emerge, emphasizing bottom up analysis over generic beta within high quality spread sectors such as investment grade corporate credit and securitized debt.

The credit quality of a particular security or group of securities does not ensure the stability or safety of an overall portfolio. The quality ratings of individual issues/issuers are provided to indicate the credit-worthiness of such issues/issuer and generally range from AAA, Aaa, or AAA (highest) to D, C, or D (lowest) for S&P, Moody's, and Fitch respectively.

Investment Grade (IG)

Beta is a measure of price sensitivity to market movements. Market beta is 1.

Effective duration is a calculation for bonds with embedded options. For a portfolio of bonds, average effective maturity is the weighted average of the maturities of the underlying bonds. Duration is a measure of a portfolio's sensitivity to price, expressed in years.

Allocation mix is subject to change and may not be representative of current or future allocations.

Allocation percentages may not equal 100 due to rounding.

¹ Government-related may include nominal and inflation-protected treasuries, agencies, and FDIC-guaranteed corporate securities.

² The Securitized Bucket will include Agency MBS, non-Agency MBS, CMBS, ABS, CDO, CLO, and Pooled Funds

³ Net Other Short Duration Instruments includes securities and other instruments (except those instruments tied to emerging markets by country of risk) with an effective duration less than one year and rated investment grade or higher or, if unrated, determined by PIMCO to be of comparable quality, commingled liquidity funds, uninvested cash, interest receivables, net unsettled trades, broker money, short duration derivatives and derivatives offsets. With respect to certain categories of short duration securities, the Adviser reserves the discretion to require a minimum credit rating higher than investment grade or take into account other pertinent factors for inclusion in this category. Derivatives Offsets includes offsets associated with investments in futures, swaps and other derivatives. Such offsets may be taken at the notional value of the derivative position.

Enhanced Short Maturity Active ESG Exchange-Traded Fund (EMNT)

Investors should consider the investment objectives, risks, charges and expenses of the funds carefully before investing. This and other information are contained in the Fund's prospectus, which may be obtained by contacting your PIMCO representative. Please read the prospectus carefully before you invest.

Past performance is not a guarantee or a reliable indicator of future results. The performance figures presented reflect the total return performance, unless otherwise noted, and reflect changes in share price and reinvestment of dividend and capital gain distributions. All periods longer than one year are annualized. Periods less than one year are cumulative.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

Exchange Traded Funds ("ETF") are afforded certain exemptions from the Investment Company Act. The exemptions allow, among other things, for individual shares to trade on the secondary market. Individual shares cannot be directly purchased from or redeemed by the ETF. Purchases and redemptions directly with ETFs are only accomplished through creation unit aggregations or "baskets" of shares. Shares of an ETF, traded on the secondary market, are bought and sold at market price (not NAV). Brokerage commissions will reduce returns. Investment policies, management fees and other information can be found in the individual ETF's prospectus. **Buying or selling ETF shares** on an exchange may require the payment of fees, such as brokerage commissions, and other fees to financial intermediaries. In addition, an investor may incur costs attributed to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the bid-ask spread). Due to the costs inherent in buying or selling Fund shares, frequent trading may detract significantly from investment returns. Investment in Fund shares may not be advisable for investors who expect to engage in frequent trading. **Net Asset Value (NAV) represents an ETF's per-share value.** The per-share value of an ETF is calculated by dividing the total value of the securities in its portfolio, less any liabilities, by the number of ETF shares outstanding. ETF shares are valued as of the close of regular trading on the NYSE Arca (normally 4:00 P.M. Eastern Time) (The "NYSE Close") on each business day. The Fund's Net Asset Value, shares outstanding and total net assets are calculated as of the close of regular trading on each day that the NYSE Arca is open, and do not reflect security transactions or Fund shares created or redeemed on the date stated. Such transactions are recorded on the next business day and reported on the website the following business day. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market returns are based upon the midpoint of the bid/ask spread at 4:00 pm Eastern time (when NAV is normally determined for most ETFs), and do not represent the returns you would receive if you traded shares at other times.

A word about risk: Investing in the **bond market** is subject to certain risks including the risk that fixed income securities will decline in value because of changes in interest rates; the risk that fund shares could trade at prices other than the net asset value; and the risk that the manager's investment decisions might not produce the desired results. Investing in **foreign denominated and/or domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets.

Mortgage and asset-backed securities may be sensitive to changes in interest rates, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee there is no assurance that private guarantors will meet their obligations.

Diversification does not ensure against loss.

Premiums or discounts are the differences (expressed as a percentage) between the NAV and the Market Price of the Fund on a given day, generally at the time the NAV is calculated. A premium is the amount that the Fund is trading above the reported NAV, expressed as a percentage of the NAV. A discount is the amount that the Fund is trading below the reported NAV, expressed as a percentage of the NAV. A discount or premium could be significant. The daily premium/discount is the difference between the daily market price for shares of the Fund and the Fund's net asset value. For purposes of the premium/discount information, market price is determined using NYSE Arca's Official Closing Price or if it more accurately reflects market price at the time as of which NAV is calculated, the midpoint between the national best bid and national best offer as of that time. Market price for purposes of other information is calculated as follows: (i) for time periods preceding December 17, 2020, the midpoint between the highest bid and the lowest offer on the listing exchange, as of the time that the Fund's NAV is calculated and (ii) for the time periods starting December 17, 2020, the NYSE Arca's Official Closing Price or, if it more accurately reflects market price at the time as of which NAV is calculated, the midpoint between the national best bid and national best offer as of that time. **Market Price** is the Official Closing Price on NYSE Arca, or if it more accurately reflects market value at the time as of which NAV is calculated, the midpoint between the national best bid and national best offer as of that time. **Median Bid/Ask spread** is difference between the bid price for a security and its ask price. It is expressed as a percentage (rounded to the nearest hundredth) that is computed by identifying the fund's national best bid and national best offer as of the end of each 10-second interval during each trading day for the last 30 calendar days, dividing the difference between each such bid and offer by the midpoint of the national best bid and national best offer, and identifying the median of those values.

ETFs are subject to secondary market trading risks. Shares of an ETF will be listed for trading on an exchange, however, there can be no guarantee that an active trading market for such shares will develop or continue. There can be no guarantee that an ETF's exchange listing or ability to trade its shares will continue or remain unchanged. Shares of an ETF may trade on an exchange at prices at, above or below their most recent NAV. The per share NAV of an ETF is calculated at the end of each business day, and fluctuates with changes in the market value of the Fund's holdings. The trading prices of an ETF's shares fluctuate continuously throughout the trading day based on market supply and demand, which may not correlate to NAV. The trading prices of an ETF's shares may differ significantly from NAV during periods of market volatility, which may, among other factors, lead to the Fund's shares trading at a premium or discount to NAV.

In order to provide additional information regarding the **intra-day value** of shares of the Fund, the NYSE Arca, Inc. or a market data vendor disseminates every 15 seconds through the facilities of the Consolidated Tape Association or other widely disseminated means an updated Indicative NAV ("iNAV") for the Fund as calculated by an information provider or market data vendor. The Fund is not involved in or responsible for any aspect of the calculation or dissemination of the iNAV and makes no representation or warranty as to the accuracy of the iNAV.

Current holdings are subject to risk. Holdings are subject to change at any time. An investment in an ETF involves risk, including the loss of principal. Investment return, price, yield and Net Asset Value (NAV) will fluctuate with changes in market conditions. Investments may be worth more or less than the original cost when redeemed.

FTSE 3-Month Treasury Bill Index is an unmanaged index representing monthly return equivalents of yield averages of the last 3 month Treasury Bill issues. It is not possible to invest in an unmanaged index.
