Fund description

The PIMCO Active Bond Exchange-Traded Fund (Ticker: BOND) is a diversified portfolio of high quality bonds that is actively managed, seeking current income and long-term capital appreciation, consistent with prudent investment management. BOND invests primarily in investment grade debt securities, and discloses all portfolio holdings on a daily basis. The Fund will seek to maintain a fairly consistent level of dividend income, and generally seeks to manage capital gain distributions. However, there can be no assurance that a change in market conditions or other factors will not result in a significant change in the Fund's distribution rate or that the rate will be sustainable in the future. With a primary benchmark of the Bloomberg Barclays U.S. Aggregate Index, the fund offers a core bond strategy that is designed to capitalize on opportunities across multiple sectors of the fixed income market.

Investor benefits

The ETF structure allows for trading throughout the day, and BOND has the same expense ratio for all investors, regardless of transaction size. Fund shares are publicly traded and conveniently available to any investor who can access a major stock exchange.

Potential benefits of this fund include:

- **Direct access** to PIMCO's portfolio management expertise, including global credit analysis and interest rate forecasting
- Portfolio diversification, income, the opportunity for capital appreciation and excess return in an **actively managed, risk-managed framework**
- An investment strategy **managed for all market environments**, emphasizing both top-down macroeconomic analysis and bottom-up issue selection
- Full **benefits and flexibility** of the ETF vehicle, including intraday pricing, the ability to be traded using limit and stop loss orders as well as on margin, daily portfolio disclosure and low investment minimum (1 share)

The fund advantage

BOND deploys PIMCO's time-tested investment process, which combines top-down and bottom-up strategies. Top-down strategies are driven by our global secular outlook for the forces likely to influence the economy and financial markets over the next three to five years and our cyclical views of six- to 12-month trends. Bottom-up strategies drive our security selection process and facilitate the identification and analysis of potentially undervalued securities. By combining perspectives from both the portfolio and security levels, we strive to add value over time within acceptable levels of portfolio risk. BOND benefits from the firm's expertise in active fixed income investing, economic forecasting, central bank policy analysis and risk management. Since the firm's inception in 1971, PIMCO has been a pioneer in fixed income total return investing, and is now a market leader in active ETF management.

IMPORTANT NOTICE

Please note that the following contains the opinions of the manager as of the date noted, and may not have been updated to reflect real time market developments. All opinions are subject to change without notice.

Active Bond Exchange-Traded Fund

AS OF: 31 MARCH 2021

Performance (average annual returns %)

	Since Inception	5 yr	3 yr	1 yr	6 mos	3 mos
PIMCO ETF						
NAV	4.29	3.86	4.94	4.63	-1.21	-2.63
Share price (market price)	4.29	3.87	4.95	5.74	-1.34	-2.83
Benchmark (%)	2.89	3.10	4.65	0.71	-2.73	-3.37

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and principal value will fluctuate, so that Fund shares may be worth more or less than their original cost when sold. Performance data current to the most recent month-end is available at www.pimco.com or by calling 888.400.4ETF.

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index. There is no assurance that any fund, including any fund that has experienced high or unusual performance for one or more periods, will experience similar levels of performance in the future. High performance is defined as a significant increase in either 1) a fund's total return in excess of that of the fund's benchmark between reporting periods or 2) a fund's total return in excess of the fund's historical returns between reporting periods. Unusual performance is defined as a significant change in a fund's performance as compared to one or more previous reporting periods.

Investors should consider the investment objectives, risks, charges and expenses of the funds carefully before investing. This and other information are contained in the Fund's prospectus, which may be obtained by contacting your PIMCO representative. Please read the prospectus carefully before you invest.

¹ Includes U.S. Treasury notes, bonds, futures, and inflation-protected securities ² Includes U.S. agencies, FDIC-guaranteed and government-guaranteed corporate securities, and supranationals ³ Includes U.S. dollar denominated interest rate swaps, swaptions, options, and other rate related derivatives. ⁴ Other portfolio derivatives, where applicable, may be included as part of other sectors based upon their underlying risk characteristics. ⁵ The Securitized bucket will include Agency MBS, non-Agency MBS, CMBs, ABS, CDO, CLO, and Pooled Funds. ⁶ May include municipals, convertibles, preferreds, and yankee bonds. ⁷ Net Other Short Duration Instruments includes securities and other instruments (except those instruments tied to emerging markets by country of risk) with an effective duration less than one year and rated investment grade or higher or, if unrated, determined by PIMCO to be of comparable quality, commingled liquidity funds, uninvested cash, interest receivables, net unsettled trades, broker money, short duration derivatives and derivatives offsets. With respect to certain categories of short duration securities, the Adviser reserves the discretion to require a minimum credit rating higher than investment grade for inclusion in this category. Derivatives Offsets includes offsets associated with investments in futures, swaps and other derivatives. Such offsets may be taken at the notional value of the derivative position. The performance figures presented reflect the total return performance, unless otherwise noted, and reflect changes in share price and reinvestment of dividend and capital gain distributions. All periods longer than one year are annualized. Periods less than one year are cumulative.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

Exchange Traded Funds ("ETF") are afforded certain exemptions from the Investment Company Act. The exemptions allow, among other things, for individual shares to trade on the secondary market. Individual shares cannot be directly purchased from or redeemed by the ETF. Purchases and redemptions directly with ETFs are only accomplished through creation unit aggregations or "baskets" of shares. Shares of an ETF, traded on the secondary market, are bought and sold at market price (not NAV). Brokerage commissions will reduce returns. Investment policies, management fees and other information can be found in the individual ETF's prospectus.

Buying or selling ETF shares on an exchange may require the payment of fees, such as brokerage commissions, and other fees to financial intermediaries. In addition, an investor may incur costs attributed to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the bid-ask spread). Due to the costs inherent in buying or selling Fund shares, frequent trading may detract significantly from investment returns. Investment in Fund shares may not be advisable for investors who expect to engage in frequent trading.

A word about risk: Investing in the **bond market** is subject to certain risks including the risk that fixed income securities will decline in value because of changes in interest rates; the risk that fund shares could trade at prices other than the net asset value; and the risk that the manager's investment decisions might not produce the desired results. Investing in **foreign denominated and/or domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. **Mortgage and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee there is no assurance that private guarantors will meet their obligations. **High-yield, lower-rated, securities** involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not. **Equities** may decline in value due to both real and perceived general market, economic, and industry conditions. **Derivatives** may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested.

Diversification does not ensure against loss.

In order to provide additional information regarding the intra-day value of shares of the Fund, the NYSE Arca, Inc. or a market data vendor disseminates every 15 seconds through the facilities of the Consolidated Tape Association or other widely disseminated means an updated Indicative NAV ("iNAV") for the Fund as calculated by an information provider or market data vendor. The Fund is not involved in or responsible for any aspect of the calculation or dissemination of the iNAV and makes no representation or warranty as to the accuracy of the iNAV.

Net Asset Value (NAV) represents an ETF's per-share value. The per-share value of an ETF is calculated by dividing the total value of the securities in its portfolio, less any liabilities, by the number of ETF shares outstanding. ETF shares are valued as of the close of regular trading on the NYSE Arca (normally 4:00 P.M. Eastern Time) (The "NYSE Close") on each business day.

The Fund's Net Asset Value, shares outstanding and total net assets are calculated as of the close of regular trading on each day that the NYSE Arca is open, and do not reflect security transactions or Fund shares created or redeemed on the date stated. Such transactions are recorded on the next business day and reported on the website the following business day.

Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market returns are based upon the midpoint of the bid/ask spread at 4:00 pm Eastern time (when NAV is normally determined for most ETFs), and do not represent the returns you would receive if you traded shares at other times.

Current holdings are subject to risk. Holdings are subject to change at any time. An investment in an ETF involves risk, including the loss of principal. Investment return, price, yield and Net Asset Value (NAV) will fluctuate with changes in market conditions. Investments may be worth more or less than the original cost when redeemed.

Premium/Discount is the difference between the market price and NAV expressed as a percentage of NAV. **Market Price** is the Official Closing Price on NYSE Arca, or if it more accurately reflects market value at the time as of which NAV is calculated, the midpoint between the national best bid and national best offer as of that time. **The difference between the bid price for a security and its ask price.** It is expressed as a percentage (rounded to the nearest hundredth) that is computed by identifying the fund's national best bid and national best offer as of the end of each 10-second interval during each trading day for the last 30 calendar days, dividing the difference between each such bid and offer by the midpoint of the national best bid and national best offer, and identifying the median of those values.

ETFs are subject to secondary market trading risks. Shares of an ETF will be listed for trading on an exchange, however, there can be no guarantee that an active trading market for such shares will develop or continue. There can be no guarantee that an ETF's exchange listing or ability to trade its shares will continue or remain unchanged. Shares of an ETF may trade on an exchange at prices at, above or below their most recent NAV. The per share NAV of an ETF is calculated at the end of each business day, and fluctuates with changes in the market value of the Fund's holdings. The trading prices of an ETF's shares fluctuate continuously throughout the trading day based on market supply and demand, which may not correlate to NAV. The trading prices of an ETF's shares may differ significantly from NAV during periods of market volatility, which may, among other factors, lead to the Fund's shares trading at a premium or discount to NAV.

About the benchmark

Bloomberg Barclays U.S. Aggregate Index represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. These major sectors are subdivided into more specific indices that are calculated and reported on a regular basis. It is not possible to invest in an unmanaged index.

It is not possible to invest directly in an unmanaged index.
