PIMCO Open-End Mutual Funds
PIMCO Closed-End Funds
PIMCO Interval Funds

This document contains tax information on PIMCO open-end mutual funds, closed-end funds and interval funds ("PIMCO funds"). Certain PIMCO funds may have qualified dividend, qualified short-term and/or qualified foreign rates. The qualified amount, if applicable, will be in box 1b of your Form 1099-DIV. The rates outlined below were used to calculate the qualified amount. See the Form 1040/1040A instructions or consult a tax professional for specific advice on how to determine this amount.

Please call us at the applicable number provided below if you have questions or need assistance. You can also visit the Tax Center page of our website, pimco.com/tax. As PIMCO does not provide legal or tax advice, please consult a tax professional and/or legal counsel with any specific tax questions and concerns.

⁶ Fund commenced operations on December 31, 2019

* Fund was acquired by PIMCO on March 18, 2019

^ Fund is scheduled to liquidate on February 7, 2020

Investors should consider the investment objectives, risks, charges and expenses of the funds carefully before investing. This and other information is contained in the fund's prospectus and summary prospectus, if available, which may be obtained by contacting your financial advisor or PIMCO representative or by visiting pimco.com. Please read them carefully before you invest or send money.

Closed-end funds, unlike open-end funds, are not continuously offered. After the initial public offering, shares are sold on the open market through a stock exchange. Closed-end funds may be leveraged and carry various risks depending upon the underlying assets owned by a fund. Investment policies, management fees and other matters of interest to prospective investors may be found in each closed-end fund annual and semi-annual report. For additional information, please contact your investment professional.

It is important to note that differences exist between the fund's daily internal accounting records, the fund's financial statements prepared in accordance with U.S. GAAP, and record keeping practices under income tax regulations. It is possible that the fund may not issue a Section 19 Notice in situations where the fund's financial statements prepared later and in accordance with U.S. GAAP or the final tax character of those distributions might later report that the sources of those distributions included capital gains and/or a return of capital. Please see the fund's most recent shareholder report for more details.

Although the Funds may seek to maintain stable distributions, the Funds' distribution rates may be affected by numerous factors, including but not limited to changes in realized and projected market returns, fluctuations in market interest rates, Fund performance, and other factors. There can be no assurance that a change in market conditions or other factors will not result in a change in the Funds' distribution rate or that the rate will be sustainable in the future.

For instance, during periods of low or declining interest rates, the Funds' distributable income and dividend levels may decline for many reasons. For example, the Fund may have to deploy uninvested assets (whether from purchases of Fund shares, proceeds from matured, traded or called debt obligations or other sources) in new, lower yielding instruments. Additionally, payments from certain instruments that may be held by the Fund (such as variable and floating rate securities) may be negatively impacted by declining interest rates, which may also lead to a decline in the Funds' distributable income and dividend levels.

Distribution rates are not performance and are calculated by annualizing the most recent distribution per share and dividing by the NAV or Market Price as of quarter end. Distributions may include ordinary income, net capital gains, and/or return of capital (ROC) of your investment in the fund). Because the distribution rate may include a ROC, it should not be confused with yield or income. A negative value for Undistributed Net Investment Income represents the potential for a ROC. The Section 19 Notice, if applicable, contains distribution composition information. Final determination of a distribution's tax character will be made on Form 1099 DIV sent each January.

PIMCO does not provide legal or tax advice. Please consult your tax advisor and/or legal counsel for specific tax questions and concerns.

A word about risk: All investments contain risk and may lose value. Investing in the bond market is subject to risks, including market, interest rate, issuer, credit, inflation risk, and liquidity risk. The value of most bonds and bond strategies are impacted by changes in interest rates. Bonds and bond strategies with longer durations tend to be more sensitive and volatile than those with shorter durations; bond prices generally fall as interest rates rise, and low interest rate environments increase this risk. Reductions in bond counterparty capacity may contribute to decreased market liquidity and increased price volatility. Bond investments may be worth more or less than the original cost when redeemed. **Derivatives and commodity-linked derivatives** may involve certain costs and risks, such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Commodity-linked derivative instruments may involve additional costs and risks such as changes in commodity index volatility or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. Investing in derivatives could lose more than the amount invested. **Equities** may decline in value due to both real and perceived general market, economic and industry conditions. Investing in **foreign-denominated and/or -domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. **High yield, lower-rated securities** involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not. **Mortgage- and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee, there is no assurance that private guarantors will meet their obligations. Income from **municipal bonds** is exempt from federal income tax and may be subject to state and local taxes and at times the alternative minimum tax.

An investment in an **interval fund** is not suitable for all investors. Unlike typical closed-end funds an interval fund's shares are not typically listed on a stock exchange. Although interval funds provide limited liquidity to investors by offering to repurchase a limited amount of shares on a periodic basis, investors should consider shares of the Fund to be an illiquid investment. Investments in interval funds are therefore subject to liquidity risk as an investor may not be able to sell the shares at an advantageous time or price. There is also **no secondary market** for an interval Fund's shares and none is expected to develop. There is no guarantee that an investor will be able to tender all or any of their requested interval fund shares in a periodic repurchase offer.

An interval fund is an unlisted closed-end "interval fund." Limited liquidity is provided to shareholders only through the fund's quarterly offers to repurchase between 5% to 25% of its outstanding shares at net asset value (subject to applicable law and approval of the Board of Trustees, the Fund currently expects to offer to repurchase 5% of outstanding shares per quarter). There is no secondary market for the fund's shares and none is expected to develop. Investors should consider shares of the fund to be an illiquid investment.

The interval fund's distribution rate may be affected by numerous factors, including changes in realized and projected market returns, fund performance, and other factors. There can be no assurance that a change in market conditions or other factors will not result in a change in the fund distribution rate at a future time.

For risks associated with a particular Fund, please refer to the Fund's prospectus.
